Why E-Waste Matters

Rapid Growth

Rising electronic device consumption drives increasing volumes of discarded electrical and electronic equipment (DEEE).

Environmental Risk

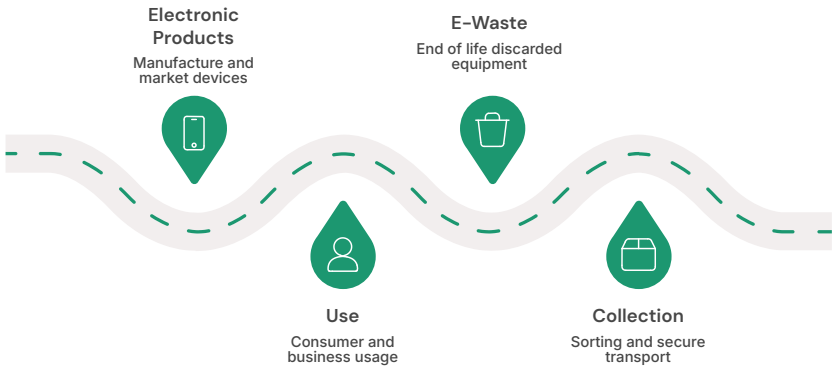

Improper handling releases toxic materials — lead, mercury, cadmium — into soil and groundwater systems.

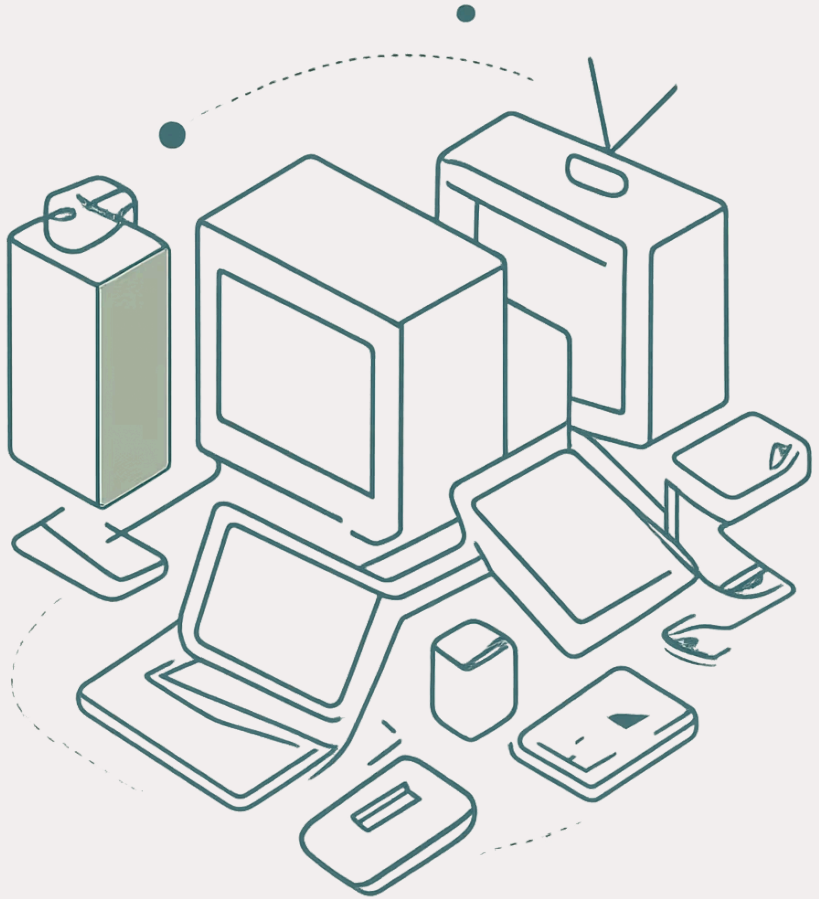

Health Hazard

Informal recycling exposes workers to hazardous substances without protective equipment or health safeguards.

Resource Value

E-waste contains recoverable copper, gold, and rare earth elements — significant economic value worth reclaiming.

Made with GAMMA

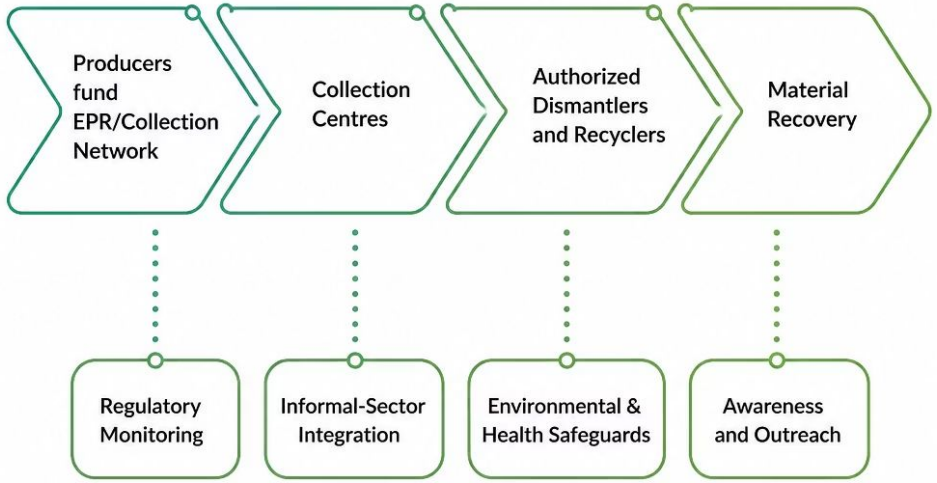

E-Waste Management Framework in India

REGULATORY FOUNDATION

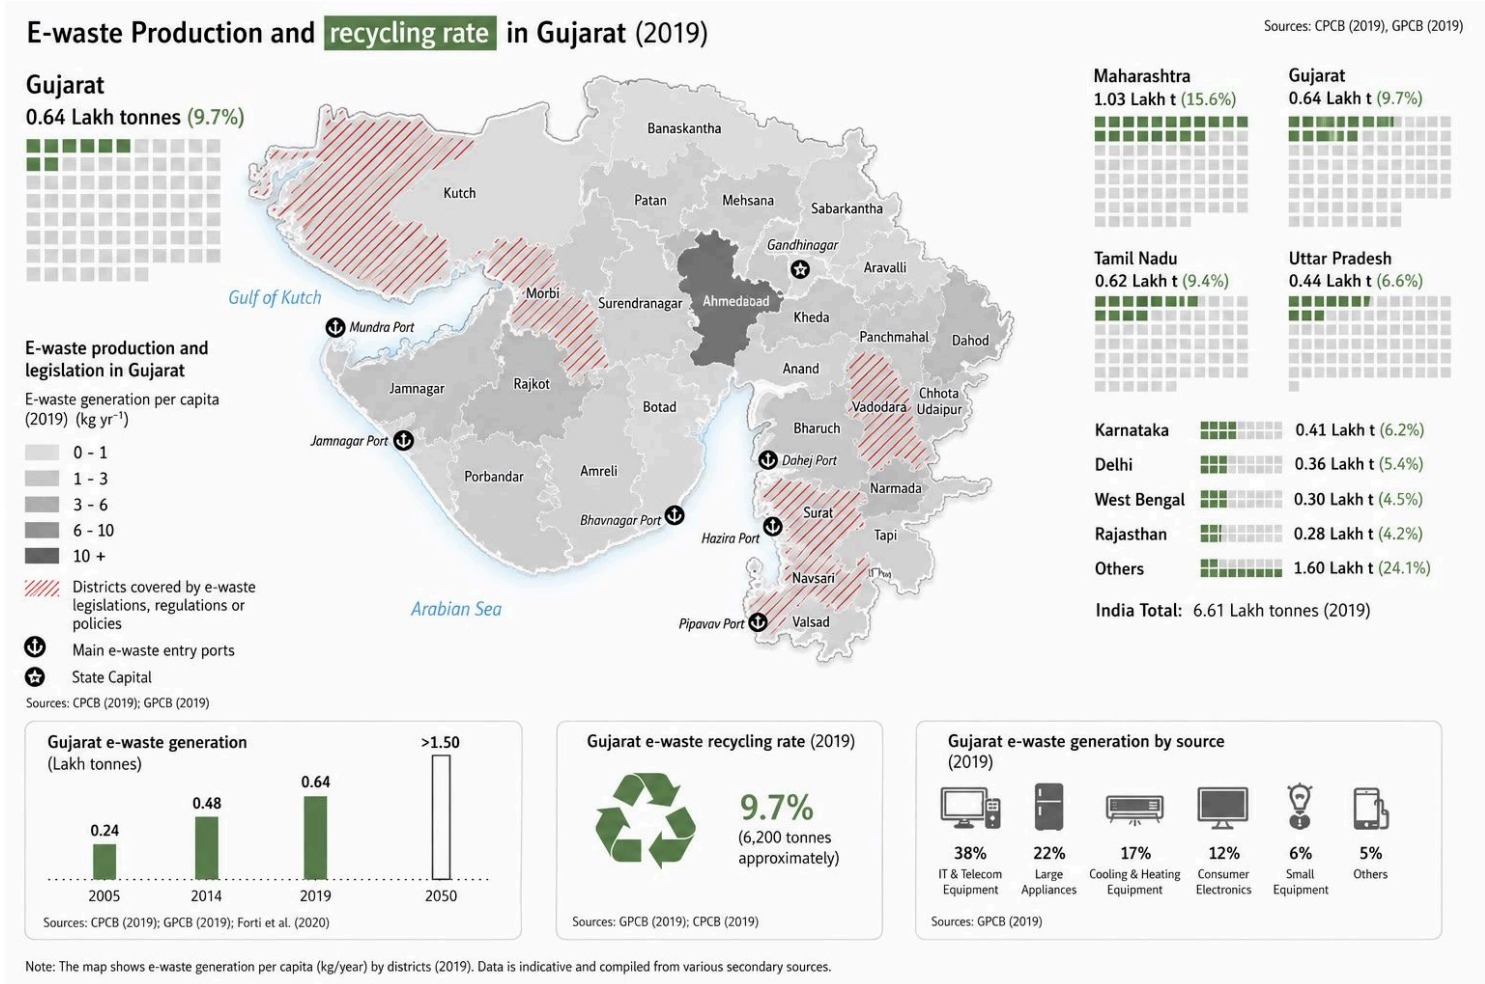

E-Waste (Management) Rules, 2022

- Extended Producer Responsibility (EPR) mandates producer accountability for end-of-life management
- Authorized collection, dismantling, and recycling infrastructure required
- Environmental and occupational health safeguards mandatory
- Informal-sector integration and worker training emphasized

EPR places legal responsibility on producers — not consumers or municipalities — to fund and manage end-of-life collection.

Collection: The Major Operational Challenge

The Collection Gap

- **Generated:** 117.23 million kg
- **Collected:** 75.08 million kg
- **Collection Rate:** 64.05%
- **Uncollected:** 42.15 million kg — a 35.95% gap

Collection Infrastructure

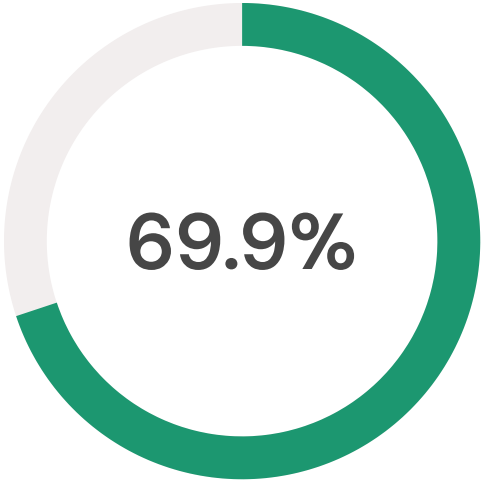

- **390** registered collection centres across 34 districts
- Avg. **11.5** centres per district — active but capacity-constrained

⚠ Closing the 35.95% gap requires expanded last-mile collection and stronger producer take-back mechanisms.

Authorized Recycling & Resource Recovery

Capacity Utilization

86,074 of 123,160 tonnes processed — 37,086 tonnes of additional headroom available

Material Recovery Rate

Weighted recovery across copper, aluminum, steel, plastics, glass, and precious metals

Recycling Capacity

- **Installed Capacity:** 123,160 tonnes/year
- **Quantity Processed:** 86,074 tonnes
- **Authorized Recyclers:** 34 facilities

Recovered Materials

- Copper, aluminum, steel
- Plastics and glass
- Precious metals and rare earth elements

EPR & Regulatory Compliance

Producer Compliance Status

Overall Compliance Achievement: **85.29%**

Strong regulatory compliance demonstrates producer accountability and system maturity.

Source: Gujarat E-Waste Tracker FY 2025–26

Compliance Mechanisms

1 EPR Registration & Documentation

Producers register under EPR framework and maintain records

2 Inspections & Audits

Regular site inspections verify compliance with rules

3 Monitoring & Reporting

Ongoing compliance tracking through the state dashboard

4 Corrective Action Protocols

Structured response pathways for partially compliant producers

29	5	0
Compliant Producers	Partially Compliant	Non-Compliant

Bringing the Informal Sector into the Formal System

Current Status

57.78%

Registration Coverage

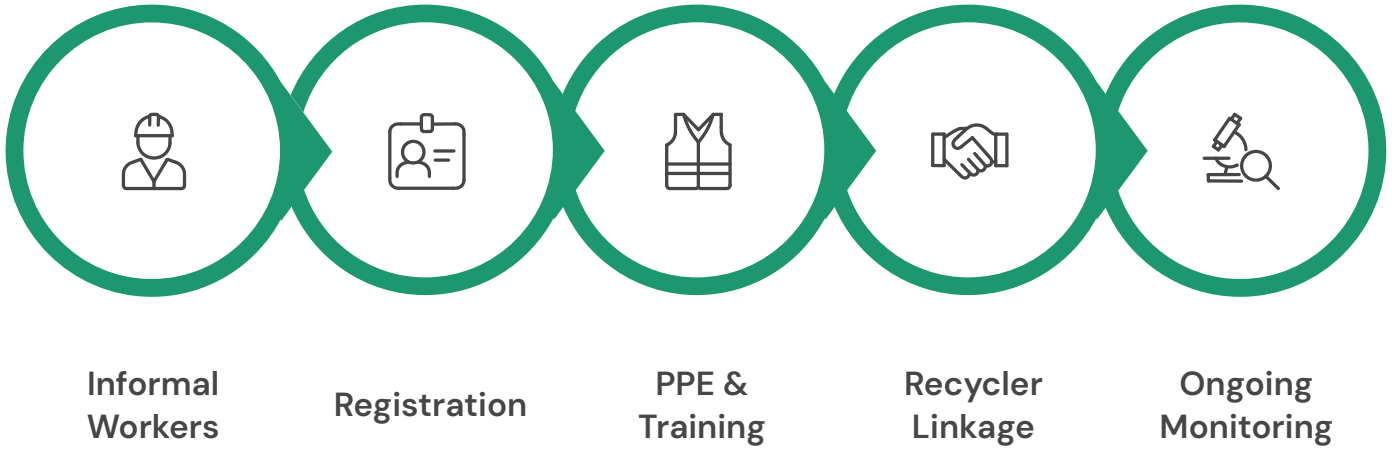

598 of 1,035 workers registered and trained

- **Estimated Informal Workers:** 1,035
- **Registered/Trained:** 598 workers
- **Still Unregistered:** 437 workers (42.22%)

Full formalization could increase collection efficiency by 10–15% and improve occupational health for vulnerable workers.

Source: Gujarat E-Waste Tracker FY 2025–26

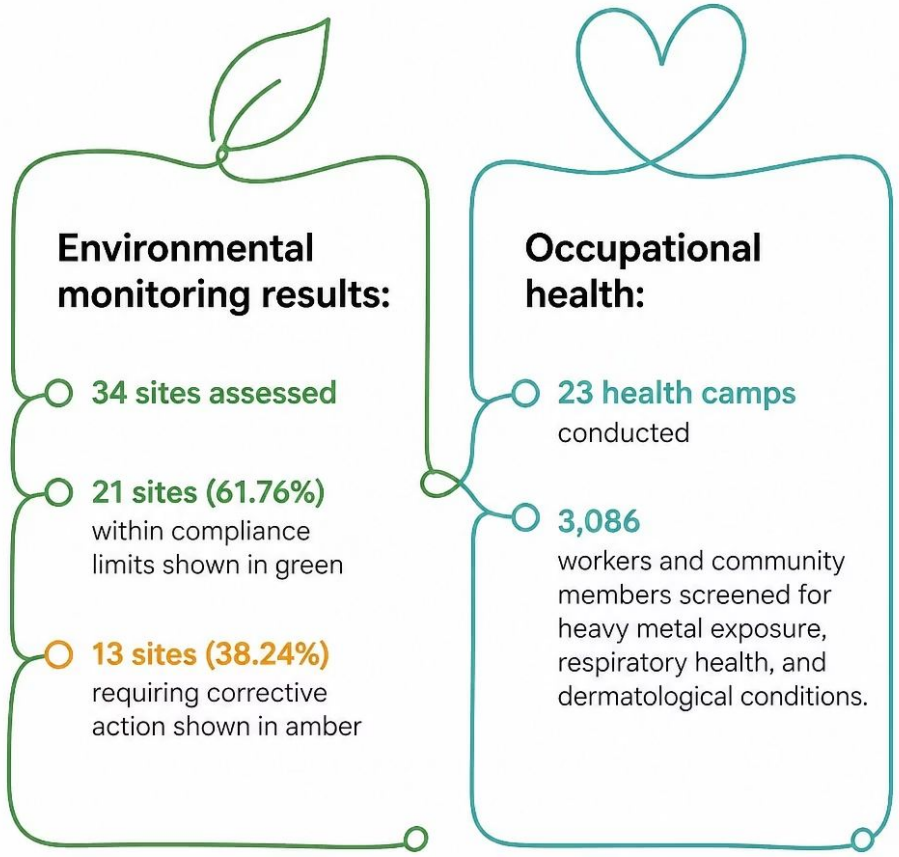

Formalization Pathway

Integrating informal workers improves worker safety, ensures proper material handling, and increases overall system efficiency.

Environmental & Health Monitoring

Monitoring Coverage

- **34** facilities assessed
- **21 sites (61.76%)** within compliance limits
- **13 sites (38.24%)** requiring corrective action

Occupational Health Screening

- **23** health camps conducted
- **3,086** workers and community members screened
- Focus: heavy metal exposure, respiratory health, dermatological conditions

⚠ 38.24% of sites require corrective action — stronger environmental compliance and worker safety protocols are needed.

Awareness Drives & Public Participation

34

Programs Conducted

Awareness & outreach initiatives across all districts

29,949

Individuals Reached

Average 880 participants per program

100%

Awareness Score

Comprehensive engagement across all stakeholder groups

RWA Camps

Residential Welfare Associations — household-level awareness and take-back

College Drives

Institutional e-waste collection and student engagement programs

Market Campaigns

Retail and commercial take-back initiatives

School Programs

Youth education and on-campus collection drives

Community Events

Neighborhood outreach and behavioral change campaigns
