

ATTEROS RECYCLING

E-Waste Solution — Turning Electronic Waste into Valuable Resources

Group Members: Siya Dalal (25102A2009) • Siddhi Kharangate (25102A2001) • Abhay Sonone (25102A2003) • Sumit Shidole (25102A2004)

Made with GAMMA

Problem

Rapid e-waste growth

Device turnover and short lifecycles are increasing e-waste volumes.

Environmental harm

Improper disposal leads to soil, water and air pollution.

Resource loss

Valuable metals (gold, copper, lithium) are wasted when not recovered.

Convenience gap

Limited, fragmented collection options make recycling difficult for users.

Made with GAMMA

Our Solution

ATTEROS RECYCLING offers an organised end-to-end service that makes e-waste recycling convenient, responsible and value-driven.

E-waste collection

Local drop-off points and scheduled collections.

Doorstep pickup

Book pickups via app or helpline for households and businesses.

Sorting & processing

Manual + automated sorting to separate hazardous components and recoverables.

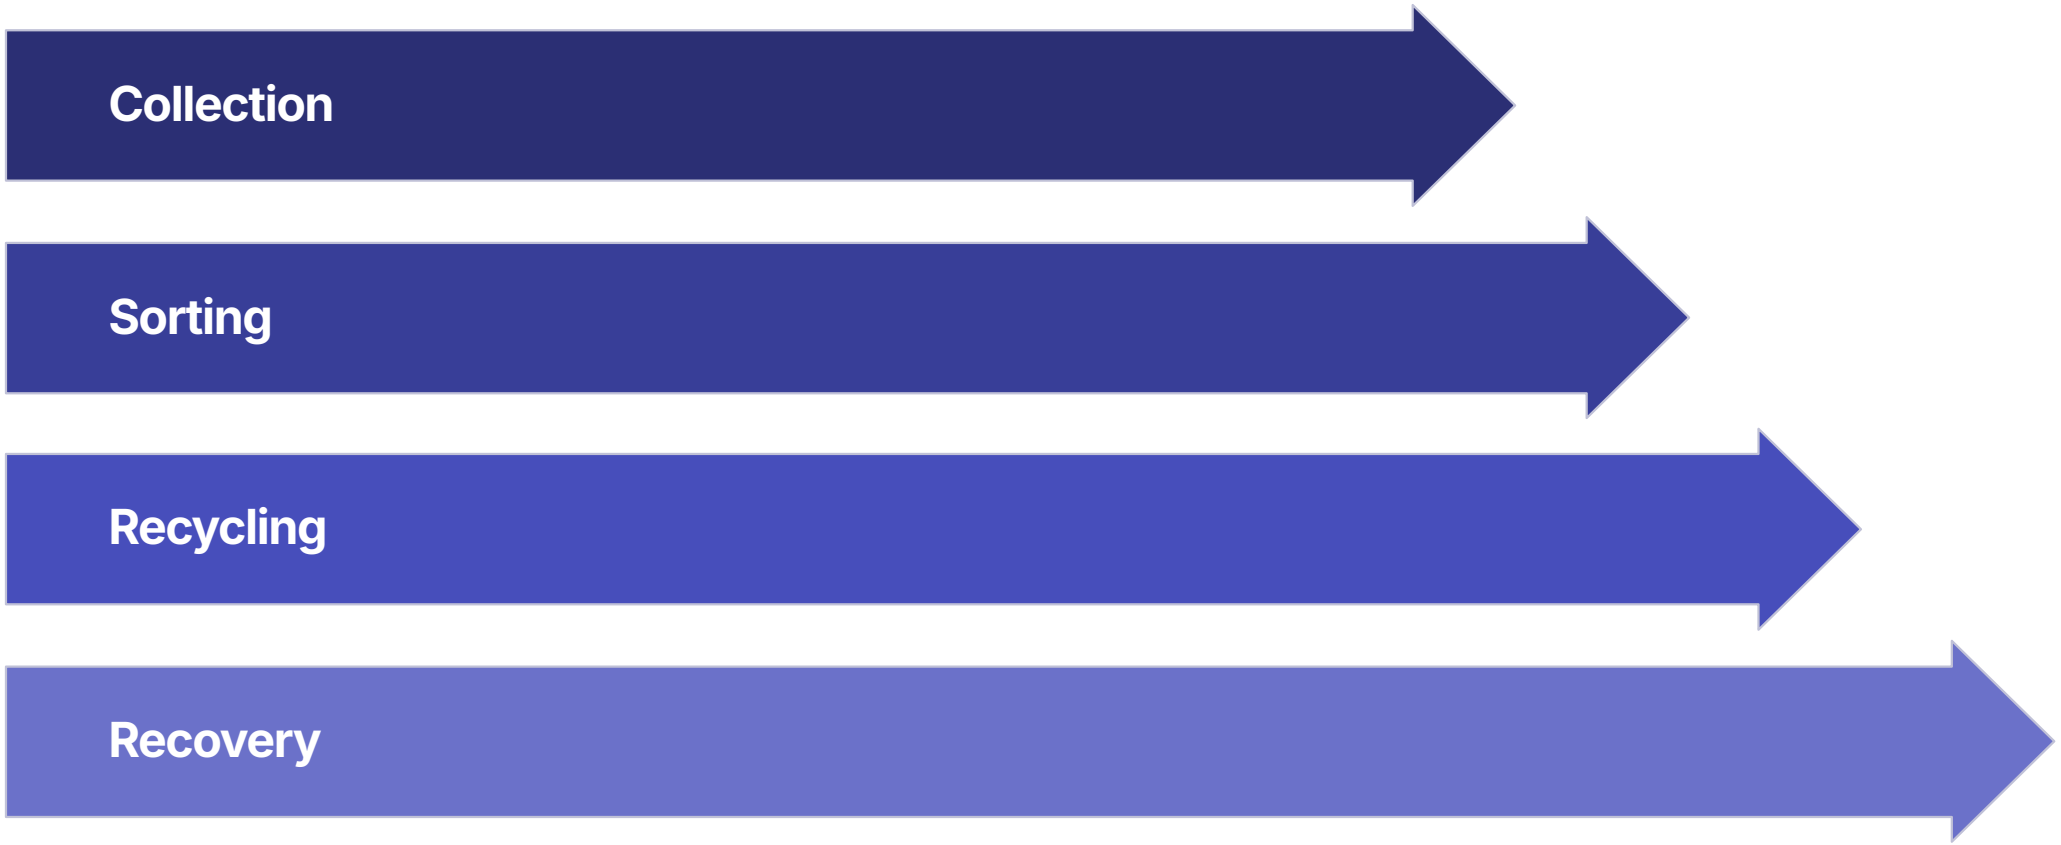

Recycling & recovery

Smelting, mechanical separation and safe disposal of hazardous waste.

Made with GAMMA

How It Works

Simple, transparent process: users hand off or schedule pickup → items are sorted and processed → valuable materials recovered for resale or safe reuse.

Made with GAMMA

Target Users

- Households — convenient disposal for everyday devices
- Students & colleges — campus collection drives and drop-offs
- Offices & businesses — scheduled bulk pickups
- Electronics retailers — trade-in and collection partnerships
- Manufacturers & organizations — end-of-life product programs

Made with GAMMA

Business Model

Material sales

Refined metals and battery materials sold to recyclers and manufacturers.

Recycling services

Fee-based collection and processing for corporates and estates.

Corporate partnerships

Long-term contracts with retailers, manufacturers and institutions.

Refurbish & resale

Repair and resell usable devices to extend product life.

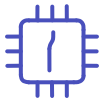

Battery recycling

Specialised processing for lithium-ion batteries with premium recovery value.

Made with GAMMA

Technology & Impact

- Smart e-waste categorization using image recognition and barcode scanning
- Advanced recycling processes for higher recovery rates
- Recovered materials: copper, gold, lithium, cobalt — returned to supply chains
- Reduced landfill waste and lower environmental contamination
- Supports a circular economy and sustainable manufacturing

Smart sorting

AI-assisted screening for efficient separation.

Higher recovery

Optimised processes increase material yield and value.

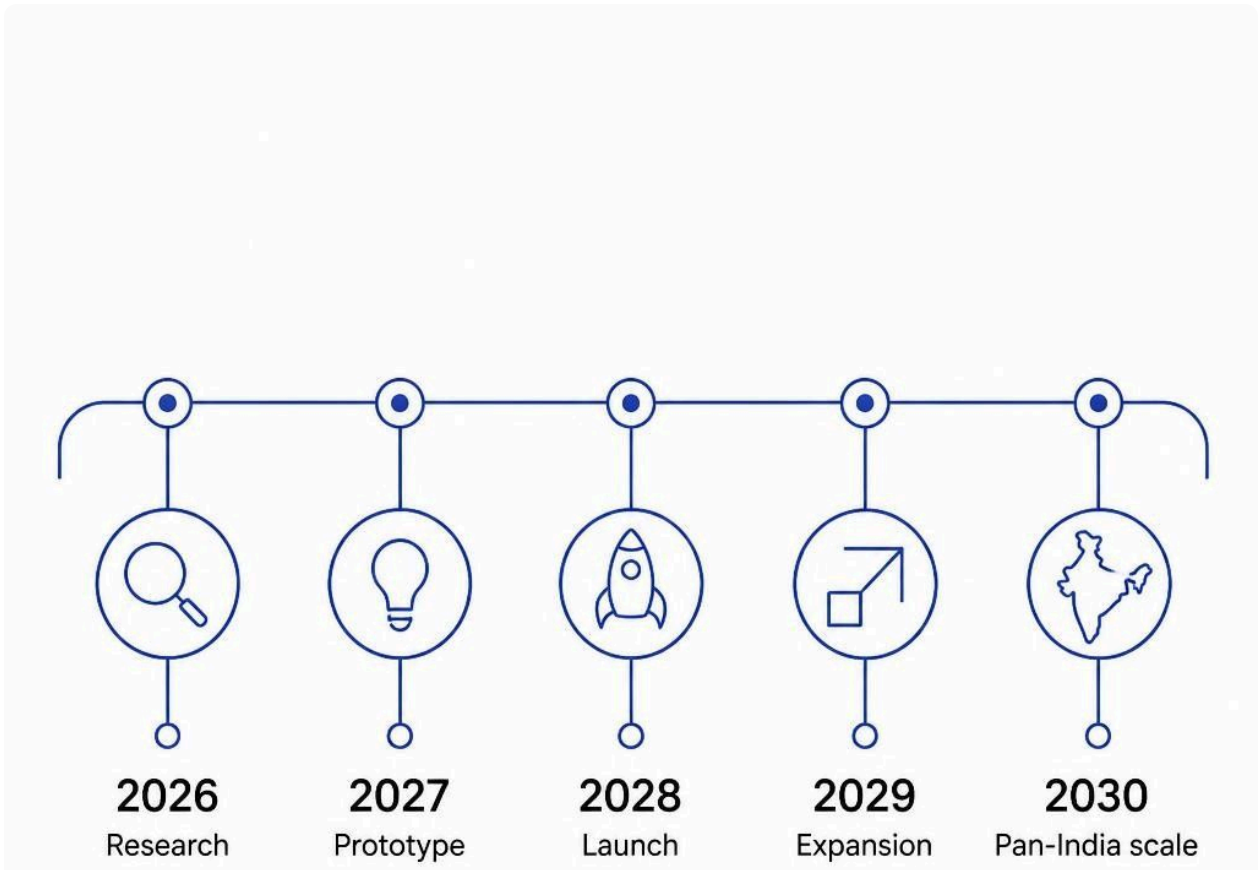

Environmental benefit

Lower emissions and safer hazardous waste handling.

Made with GAMMA

Timeline — Our Startup Journey

2026 — Research

Validate problem, user interviews and material studies.

2027 — Prototype

Develop platform, pilot collection and sorting tests.

2028 — Launch

Start city collections and doorstep pickups.

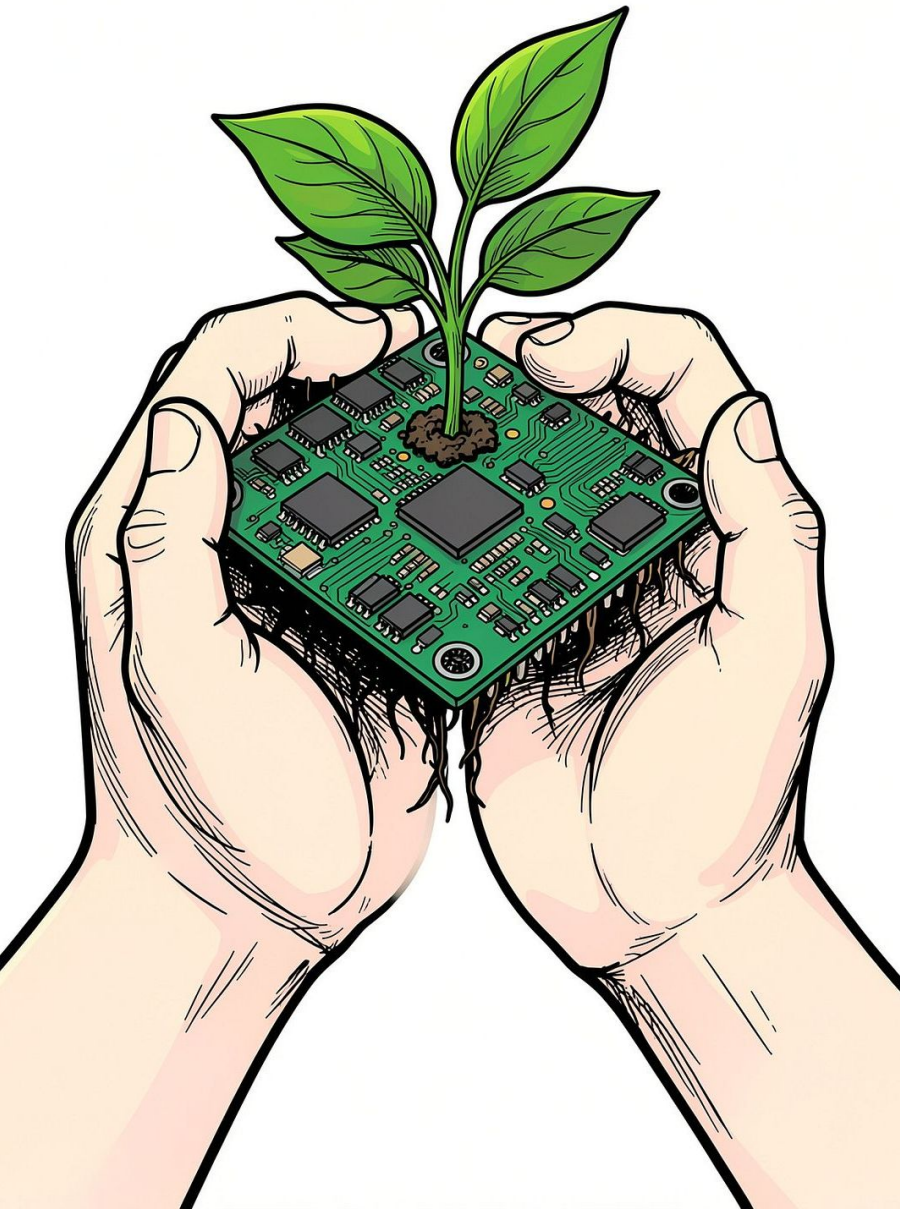

2029 — Expansion

Scale to multiple cities and introduce smart sorting centers.

2030 — Pan-India

Nationwide rollout supporting circular manufacturing.

Made with GAMMA

Conclusion

ATTEROS RECYCLING transforms e-waste from a waste problem into a valuable resource.

- Convenient, responsible disposal through doorstep and drop-off services
- Recovery of valuable materials to feed manufacturing supply chains
- Reduced environmental impact and safer handling of hazardous components
- Towards a cleaner, circular and sustainable future

Next steps: pilot sign-ups, campus drives, and early corporate partnerships.
